

BAGMERE

Access:

Due to the fragile nature of the fenland access is restricted. The reserve can be viewed from the public footpath to the north.

Location: Bagmere is located between Holmes Chapel and Congleton, (O.S. Grid Ref.: SJ795643). Our reserve occupies 10 hectares, and is part of the larger SSSI.

Habitat Summary

A Site Special of Scientific Interest (SSSI), Bagmere is the bed of a formerly larger mere, which has now almost completely filled with peat. A small area of open water remains, surrounded by particularly rich fen, marshy grassland and carr woodland.

Don't forget to submit your records via the link on the CWT website reserves page.
