

# SALTERSLEY MOSS

**Access:** The reserve is open to all.

**Location:** The reserve (1 ha), which lies on a raised peat moss, is situated to the west of Wilmslow (O.S. Grid Ref.: SJ822805).

## Habitat Summary

The majority of the reserve consists of uncut peat moss, contrasting the surrounding area which is still commercially exploited. As this cutting continues the reserve tends to dry out encouraging colonisation by birch, oak and alder buckthorn. The drier peat land attracts plants such as ling and bilberry.

Don't forget to submit your records via the link on the CWT website reserves page.
